

Special corrugation patterns promote highly turbulent flow. Turbulence dramatically improves heat transfer rates and reduces the amount of deposits inside the unit.

Advantages of AIC Double Wall Brazed Plate Heat Exchangers

- visual leak detection
- prevents fluid cross-contamination
- high thermal efficiency
- compact design
- strong, durable stainless steel construction
- quick and easy installation

The design of the double wall brazed plate heat exchanger prevents cross contamination of fluid streams if there is an internal leak within the unit.

Two stainless steel plate walls separate the fluid streams, with an air gap in between. In the event of a leak, the affected fluid will flow into the air gap and escape out of the heat exchanger, enabling visual detection of the leak.

Leaks escape into the atmosphere through the air gap between the double walls.

Flow Channel Diagram in Double Wall Heat Exchanger

Double walls allow leaks to be visually detected without cross contaminating the fluid streams.

Technical Parameters

Model	Dimensions mm (in)					Plate Area m ² (sq.ft)	Channel Volume L (Gal)	Maximum Flow L/min (GPM)	Maximum Number of Plates	Weight (empty) kg (lb)
	A	B	C	D	F					
LA14 DW	201 (7.9)	79 (3.1)	165 (6.5)	43 (1.7)	7.62 + 2.36NP(0.30 + 0.093NP)	0.014 (0.15)	0.023 (0.006)	75 (20)	50	0.9 + 0.07NP(2.0 + 0.15NP)

LC110 DW	462 (18.2)	254 (10.0)	378 (14.9)	170 (6.7)	12.7 + 2.03NP(0.50 + 0.08NP)	0.110 (1.18)	0.163 (0.043)	340 (90)	80	3.6 + 0.5NP(8.0 + 1.10NP)

NP - number of plates

Standard Construction

- Double Wall Plates
- Plate Material: ANSI 316
- Brazing Material: Copper

Design Parameters

- Working Temperature up to 445°F
- Working Pressure up to 481 PSI

Standard Connection Sizes

Heat Exchanger Type	Solder (in)*	Thread NPT (in)
LA14 DW	7/8"	3/4"
LB31 DW	1-1/8"	1"
LC110 DW	1-5/8"	1-1/2"

* inner diameter of connection

Applications:

- Potable Water Heating
- Domestic Hot Water Heating

Suitable for any stringent applications and regulations that require double wall, vented heat exchangers.

AIC heat exchangers are designed, manufactured, and tested to the strictest codes, and are certified by many national and international inspection authorities. We are a registered ISO-9001 company and are UL certified.

AIC brazed plate heat exchangers consist of stainless steel plate packs, which have embossed chevron patterns. The plates are turned 180° to each other, causing the plate ridges to interact, and creating a lattice of intersecting channels. The fluids can flow in either a counter-current or a co-current direction.

The entire construction is sealed together by means of brazing in a special vacuum furnace.
